Rexroth MSK071 Servo Motores (IndraDyn S)

Os servomotores MSK071 fazem parte da série MSK ou IndraDyn S de servomotores síncronos projetados para aplicações de alta potência. Sua precisão – combinada com potência – é um dos pontos de venda mais fortes desta série.

Outra é a gama extremamente ampla de tamanhos. Você pode ser muito específico em sua escolha de tamanhos, porque eles variam de MSK030 a MSK131. A série MSK071 está no meio da gama.

A série IndraDyn S também tem um espectro de potência extraordinariamente amplo. Com uma variedade de opções, incluindo refrigeração líquida e com ventilador, esta série de servomotores exibe um nível impressionante de versatilidade.

Quando você tem um problema com seus servos MSK071, você precisa de suporte especializado. Esses motores não são adequados para reparo em campo na máquina. Às vezes, podemos identificar seu problema com um telefonema e oferecer uma solução imediata. Se o motor estiver com defeito, no entanto, recomendamos reparo de fábrica ou reman. Isso traz sua peça de volta para você em novas condições, muitas vezes com uma nova garantia.

Tenha em mente que enviar seu servo MSK071 para reparo em uma oficina de reparo de terceiros pode invalidar sua garantia atual se ela ainda estiver em vigor. Ligue para nós assim que precisar de suporte para a solução mais econômica.
